EDUCATION

National Insitute of Technology

Bachelors of Technology, Electrical Engineering

Hamirpur 2020 - 2024

SKILLS

Programming Languages: JavaScript, TypeScript, C++, Python Libraries/Frameworks: React, Next, Node, Express, JQuery

Tools / Platforms: Linux, VScode, Git, Github, Gitbash, Webpack

Databases: MongoDB, MySQL, Firebase

PROJECTS / OPEN-SOURCE

Airbnb Clone | Link

TypeScript, React, Next

- Developed an Airbnb clone using **React** and **Next.js** with a focus on providing a fully responsive user experience.
- Utilized **MongoDB** as the database and **Prisma** as the ODM to create a scalable and efficient data management system.
- Enabled users to easily upload and reserve rental properties, enhancing the platform's usability and practicality for both hosts and guests.

IMDb Clone | Link

Javascript, React, Next

- Created an IMDb clone using **React** and **Next.js** that provides a user-friendly and fully responsive interface.
- Implemented search functionality to allow users to find movies quickly and easily.
- Designed and implemented a light and dark mode option to optimize the user's viewing experience, enhancing accessibility and aesthetics.

Workout Buddy | Link

JavaScript, MongoDB, CSS

- Created a workout tracker app called "Workout Buddy" using React, MongoDB, Express, and Node
- Implemented secure user authentication with registration, login, and **JWT tokens** for secure session management.
- Designed a user-friendly interface that allows users to input and track their workout progress with details such as reps, sets, and exercises.

Pizza Place | Link

JavaScript, Framer Motion, React

- Developed a front-end application using Framer Motion library to create engaging animations.
- Designed and implemented a pizza-making app that allows users to select ingredients and visually see the end result of their creation.
- Gained proficiency in web development and animation through the development of the pizza-making app.

Yelp Clone | Link

JavaScript, MongDB, CSS

- Designed and developed a Yelp clone using vanilla JavaScript with CRUD operations and login/register functionality.
- Implemented features that enable users to create and review places, as well as add comments and ratings for other places.
- Gained expertise in front-end web development and database management through the development of the Yelp clone.
